

Low Level & Temperature Alarm (LLTA)

The phasetwo's Low Level and Temperature Alarm (LLTA) is designed to monitor both liquid level and operating temperature inside aluminum LN2 freezers. Utilizing dual RTD probes, and fully programmable to match individual end-user needs, the Low Level and Temperature Alarm features touch screen operation, audible & visual alarms, and a universal power supply and adapters for usage worldwide. Each alarm comes complete with mounting bracket, alarm module, and probes, and each alarm module can be used to monitor two freezers with the addition of a second set of probes.

Features

- Monitors freezer temperature and level while product is removed or inserted
- Alarm module will monitor two freezers
- Dedicated and fixed position for LLTA
- Universal power supply with adapters for global usage
